

Music Market

Technology has changed rapidly over the last 20 years and while music production has changed with this advancement in technology, musical instruments have not. There are thousands of Digital Audio Workstations (DAW's) in the marketplace but the interface used for this new technology has not changed, it is the standard variety keyboard.

What is TAPI

TAPI is its own musical instrument in its own category. That being said, TAPI simulates an 88 key keyboard but fits in your pocket. All keyboard manufacturers offer a smaller version of the full 88-key keyboard but with the smaller size comes reduced functionality.

How TAPI works

TAPI uses motion to change octave. This concept was proven at Cornell University's REV Hardware incubator where TAPI produced a workable prototype. TAPI has a patent from the United States Patent and Trademark Office on this process.

What TAPI Does

TAPI is a musical instrument designed for use with today's modern technology. There are literally thousands of Digital Audio Workstations (computer programs that allow you to make music - ex Apple Garage Band) many of which are free to use. TAPI is the interface for these applications.

How TAPI is different

Computing power is provided by the device TAPI is interfacing with whether it be a cell phone, tablet laptop, desktop or VR, not TAPI. There is no unnecessary hardware redundancy. When in use with a DAW, the hardware included in a standard keyboard is not necessary.

Cost of TAPI

TAPI has few parts, making it cheaper to produce than comparable instruments.

Advantages of TAPI

TAPI can be produced, stored and shipped cheaper than any other product in this category. TAPI's size opens it up to many markets. No box retailer would give shelf space to a large keyboard. Online retailers would save storage space and shipping costs. TAPI is a great tool for music education due to its decreased size and cost. Space and portability are not barrier's to a consumer with TAPI.

TAPI is a seed-stage start-up. We have patents on other similar musical products. As such we are seeking form a new category of musical instrument and build a team to bring TAPI to the masses.
